4.2.2. Conclusion Questions

1. Did you get the same blood pressure reading manually as you did with the use of probes? Provide at least two reasons these values may be different.

2. What are two causes of blood pressure changes that might occur in a person within a given day?

3. What did you need to keep constant in your experiments? Why was it important to keep these factors constant?

4. What is prehypertension? Why do you think it is valuable to know if you are considered prehypertensive?

5. Explain how an ACE inhibitor might have helped Anna mediate her blood pressure.
